

## Innovation since 1968

### 50th company anniversary - Save the date!

Since 50 years, M+F has been offering the highest level of quality and innovation in loading processes in the mineral oil industry. In 1968, the company started by selling Smith-Meter positive displacement meters including deaerators, valves and fittings. These products quickly became market leaders in Germany and Austria. When at the end the 1970s the request came up to replace the traditional mechanical data acquisition systems, it was time for M+F's electronic flow computer systems MFX.

1st generation: The MFX.-80

The first innovative electronic product was the MFX-80, the world's first electronic flow computer for the custody transfer handling of mineral oil. With this product M+F became the national market leader. Soon after, with the introduction of COTAS 1.0 the first terminal automation systems specifically for the administration of all handling processes in mineral oil distribution plants was on the market.

From then on M+F Technologies has been one of the leading specialists in the automation, digitalization, and management of tank farms, terminals and fuel supply systems. The main focus is on loading systems for tank trucks, rail cars and ships as well as on blending systems and fuel supply systems at airports.

On the occasion of its 50th anniversary, M+F invites all customers and interested parties to a special **in-house exhibition on Thursday, November 29th, 2018**. In addition to lectures on the latest devices and software solutions live demonstrations are planned on our test stands.

4th generation: The MFX\_4

Please mark the date on **29th of November** at M+F's premises at Hamburg! Further details about the program and the course of the event will be announced in the next few weeks!

For reservations please send us an Email to [stefanie.lammel@m-f.tech](mailto:stefanie.lammel@m-f.tech) or call us under +49 (0) 40 725 50-0

We are looking forward to your visit!
