J.H.K. service

Integrated tank storage management system at 14 European sites

Venue

Hungary, Slovakia, Romania, and Austria

Project period

10/2005 – 01/2018

The mainly in Central and Eastern Europe active mineral oil group of Hungary has a large number of tank storages. We produced a highly integrated control and management system enabling transparency about all product movements and quantity balances. For more than 10 years an availability of equipment of better than 99.98 % has been guaranteed. The focus was on the standardization of the field interfaces by OPC server/client, the fully automatic access control by using biometrical registration systems as well as the integration of SAP. Currently the sites were completed by compact biofuel blending systems.

Oil and gas

Process industry

Ship building

Offshore

Order

- Combination of a local and at the same time centralized solution for tank storages in four countries
- Deployment of the central CCOTAS

Service provision

- MFX_4 flow computers
- Combination and integration of the local COTAS server with CCOTAS server
- Deployment of COTAS Biometrics

Benefits for our customers

- + Standardized OPC Server/Client communication structure
- + Use of the integrative communication approach of CCOTAS
- + Highest failure safety of the entire system
