

Reference

Conversion to MFX_4 – ready for the future

Purchaser

International refinery of mineral oil in the North of Germany

Venue

Northern Germany

J.H.K. service

Modular flow computer systems MFX_4 and Terminal Pro

Project period

04/2017 – 07/2017

M+F MFX_90 modular flow computers were replaced by the new generation MFX_4 including the operating unit MFX_4 Terminal Pro at 15 filling tracks and newly calibrated for an international group of the oil refining industry in the North of Germany. By using the plug-compatible 19" mounting frame a complex conversion of the equipment could be avoided. The complete field wiring and the existing switch cabinet could directly continued to be used. Thus the downtimes of the equipment could be reduced to a minimum.
