On-spot filling pipes – Production and repair

Purchaser

Refinery and Petrochemical Group

Venue

Europe

J.H.K. service

Production and successive change of on-spot filling pipes

Project period

06/2018

Filling pipes with bellow and flat gaskets are to be produced for a group in the petrochemical industry according to the customer's specifications. Perfect and prompt repair of further on-spot filling pipes are expected in the specialized workshop of M+F. Precision and safety within this repair are the most important standard in the specification sheet. The following commissioning including the hydraulic testing will follow with our own engineers.

Oil and gas

Energy

Process industry

Ship building

Offshore

Order

- Production of filling pipes with bellow and flat gaskets
- Repair of further filling pipes

Service provision

- Distribution of new equipment
- Repair in the specialized workshop of M+F
- Leakage and pressure test according to Directives DIN EN 12233, API 6D, API 598, ANSI

Benefits for our customers

- + Long-standing experience
- + From consulting to installation – all from one source
- + Extended life cycle of the components
- + Cost efficient and save maintenance
